

## 1. Applied Geoinformatics

### 1.1. Brief about the Program

- **Program Host** : Yarmouk University
- **Study Plan** : M.Sc. Degree
- **Plan Type** : Thesis\Non-Thesis
- **Academic Year** : 2019
- **Number of Credit Hours** : 33 Credit Hours

### 1.2. Motivation of the Program

The idea of developing the program came as a result of reviewing the actual situation of the outputs of the Jordanian universities and institutes and the need of the local and regional labor market in relation to the spatial information and its management systems and their practical applications. Survey results showed :1) Students need to update their skills and knowledge in geospatial information by developing modern academic programs that focus on new technologies and equipped with new labs; 2) urgent need to supply the labor market with skilled professionals who have the scientific knowledge and practical skills necessary to advance the development process in Jordan.

Applied Geoinformatics program at Yarmouk University is the first of its kind in Jordan and one of the few programs in the Arab region. It focuses on topics such as geospatial data collection, training, graduation project, space, large data, Web-GIS and databases. It will be one of the main pillars aiming at achieving the priorities of scientific research in Jordan, namely the employment of GIS and remote sensing techniques and their applications in sustainable development and national economic stimulus programs.

### 1.3. Competences and learning outcomes

- Discuss the theoretical principles of Geo-informatics and their role in modeling and solving environmental and urban and social issues.
- Recognize advanced analysis and interpretation skills needed in Geo-informatics.
- Apply practical remote sensing and GIS procedures for assessing and solving environmental, urban, geologic and societal problems.
- Communicate Geo-informatics related ideas and results both orally and in writing.
- Develop Geo-informatics project management, team work and leadership skills.
- Produce scientific research related to the applications of Geo-informatics.
- Ability to engage in life-long learning
- Understanding of professional and ethical responsibilities
- Ability to analyze a multi-dimensional data set for natural resources management

## 1.4. Employment/career opportunities

Graduates from this program will have great chance to find job opportunities in the following governmental agencies and private sectors:

- Ministry of Energy and Mineral Resources
- National Petroleum Company
- The Ministry of Environment
- The Ministry of Public Works and Housing
- Ministry of Municipal and Rural Affairs
- Ministry of Agriculture
- Royal Jordanian Geographical Center
- Royal Scientific Society
- The Ministry of Planning and International Cooperation
- Jordanian Armed Forces
- Ministry of Water and Irrigation
- Ministry of Transport and Communications Sector
- Department of Statistics
- Phosphate Company
- Universities and scientific institutes
- The Ministry of Tourism and Antiquities
- Ministry of Tourism
- National Electricity Company
- Private sector (engineering and mining companies, space companies, consulting firms, etc)

## 1.5. Curriculum

### I) Thesis Track

a) **Compulsory courses:** (15) Fifteen credit hours as follow:

Course Name	Weekly Hours		Credit Hours	Prerequisites
	Theoretical	Practical		
Geospatial Data Acquisition	2	1	3	-
Geodatabase Management	2	3	3	-
Geospatial Data Analysis	2	1	3	Geospatial Data Acquisition
Remote Sensing and Photogrammetry	2	1	3	-
Research Methods in Geoinformatics	3	0	3	-

**b) Elective courses:** (9) Nine credit hours selected from the following list:

Course Name	Weekly Hours		Credit Hours	Prerequisites
	Theoretical	Practical		
Big and geocrowd-sourced data	2	3	3	-
Geo-visualization	2	3	3	-
Urban and Environmental Applications of Geoinformatics	2	3	3	Geospatial Data Analysis
Geo-application Development	2	3	3	Remote Sensing, Photogrammetry
Web GIS and Geo-services	2	3	3	Geospatial Data Analysis
Engineering Surveying	2	3	3	-
Special Topics in Geoinformatics	2	3	3	Department Approval
Environmental Systems	3	0	3	-
Advanced Environmental Geology	3	0	3	-
Earthquakes	3	0	3	-

- Students select a course from each of the following groups:

Group 1	Group 2	Group 3
<ul style="list-style-type: none"> <li>• Big and geocrowd-sourced data</li> <li>• Geo-visualization</li> <li>• Special Topics in Geoinformatics</li> </ul>	<ul style="list-style-type: none"> <li>• Urban and Environmental Applications of Geoinformatics</li> <li>• Geo-application Development</li> <li>• Web GIS and Geo-services</li> <li>• Engineering Surveying</li> </ul>	<ul style="list-style-type: none"> <li>• Environmental Systems</li> <li>• Advanced Environmental Geology</li> <li>• Earthquakes</li> </ul>

**c) Thesis:** Nine (9) credit hours.

## II) Non-Thesis Track

a) **Compulsory courses:** (24) Fifteen credit hours as follow:

Course Name	Weekly Hours		Credit Hours	Prerequisites
	Theoretical	Practical		
Geospatial Data Acquisition	2	3	3	-
Geodatabase Management	2	3	3	-
Big and geocrowd-sourced data	2	3	3	
Geospatial Data Analysis	2	3	3	Geospatial Data Acquisition
Geo-visualization	2	3	3	-
Remote Sensing and Photogrammetry	2	3	3	-
Urban and Environmental Applications of Geoinformatics	2	3	3	Geospatial Data Analysis Remote Sensing, Photogrammetry
Research Methods in Geoinformatics	3	0	3	-

**b) Elective courses:** (9) Nine credit hours selected from the following list:

Course Name	Weekly Hours		Credit Hours	Prerequisites
	Theoretical	Practical		
Geo-application Development	2	3	3	Geospatial Data Analysis
Web GIS and Geo-services	2	3	3	Geospatial Data Analysis
Engineering Surveying	2	3	3	-
Special Topics in Geo-informatics	2	3	3	Department Approval
Environmental Systems	3	0	3	-
Advanced Environmental Geology	3	0	3	-
Earthquakes	3	0	3	-

- Students select two (2) courses from group1 and one course (1) from group2:

Group 1	Group 2
<ul style="list-style-type: none"> <li>Geo-application Development</li> <li>Web GIS and Geo-services</li> <li>Engineering Surveying</li> <li>Special Topics in Geo-informatics</li> </ul>	<ul style="list-style-type: none"> <li>Environmental Systems</li> <li>Advanced Environmental Geology</li> <li>Earthquakes</li> </ul>

**c) Comprehensive Exam:** Zera (0) credit hours.

## 1.6. Syllabus for all courses related to geodesy

<b>Course Name</b>	<b>Geospatial Data Acquisition</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description</b>	<p>This course focuses on the methods of acquiring, retrieving, storing, and exploring geospatial data from various resources including ground-, aerial-, and space-based techniques.</p> <p>Students will confront realistic problem scenarios that incorporate skills and concepts such as definition of data needs, metadata content standards, legal and ethical issues related to data use, data formats and types, interoperability, field collection methods and contributing data for public use.</p> <p>The main theoretical concepts of data acquisition and integration will be provided through course notes and assigned readings. Hands-on practical exercises and assignments will give students an opportunity to internalize and apply the concepts and theory learned throughout the course.</p>
<b>Learning Outcomes</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• identify and evaluate appropriate and cost-effective data sources for specific applications.</li> <li>• design and implement a strategy for capturing or sourcing geospatial data.</li> <li>• critically evaluate the potential impacts of data quality on spatial analysis and decision making.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• Defining, assessing, and evaluating data needs</li> <li>• Data Quality (data standards, types and sources of error)</li> <li>• Locate, acquire and extract data</li> <li>• Work with data formats</li> <li>• Integrate acquired data</li> <li>• Produce and understand metadata Field project</li> </ul>
<b>Prerequisite</b>	-None
<b>Course Literature</b>	<ul style="list-style-type: none"> <li>• Casagrande, G., Sik, A.S. &amp; Szabó, G., 2017. <b>Small Flying Drones : Applications for Geographic Observation</b>, Cham: Springer. 161 pages. ISBN-13: 978-3319665764</li> <li>• Konecny, G., 2014. <b>Geoinformation : remote sensing, photogrammetry, and geographic information systems</b>. 280 pages. ISBN-13: 978-0415237956</li> <li>• Bossler, J.D., Campbell, J.B., McMaster, R.B. and Rizos, C., 2010. <b>Manual of geospatial science and technology</b>. 648 pages. CRC Press. ISBN: 9781420087345.</li> <li>• Chen, Y-Q, Lee, Y-C. (eds). 2001. <b>Geographical Data Acquisition</b>. Springer 1st ed, 265 pages. ISBN-10: 3211834729, ISBN-13: 978-3211834725</li> </ul>

<b>Course Name</b>	<b>Geodatabase Management</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description:</b>	This course provides an advanced background on Database Management System (DBMS) as an integral and essential part of GIS. The course presents data models, implementation and the relational, hierarchical, and network approaches to database management systems. The course covers several aspects such as geodatabase overview, architecture, design, and building.
<b>Learning Outcomes:</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• recognize the importance of using databases in GIS environment.</li> <li>• develop database models for different data types.</li> <li>• demonstrate understanding and competency of spatial database systems such as architectures and query.</li> </ul>
<b>Syllabus</b> (List of lessons)	<ul style="list-style-type: none"> <li>• Introduction to spatial database.</li> <li>• Spatial data models</li> <li>• Spatial data mining</li> <li>• Introduction to Geodatabase. Differences between personal, file, and enterprise Geodatabase. Storing different types of data in the Geodatabase. Subtypes and topology in the Geodatabase.</li> <li>• Geodatabase design.</li> <li>• Understanding ArcSD</li> <li>• Working with vectors inside the GDB</li> <li>• Working with rasters inside the GDB</li> </ul>
<b>Prerequisite</b>	-None
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Nasser, H. 2014. <b>Learning ArcGIS Geodatabase</b>. 1st ed, 158 pages. . Packet Publishing. Print ISBN: 1783988649</li> <li>• Zeiler, M. 2010. <b>Modeling Our World: The Esri Guide to Geodatabase Concepts</b>. 2nd ed, 308 pages. ESRI Press. Print ISBN: 1589482786. <b>Course name</b>	<b>Big and geocrowd-sourced data</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description</b>	This course aims to familiarize students with big data as basis for addressing substantive research questions. The focus is given to the new emerging available big data coming from different in-situ geolocated sensors, different platforms such as UAV and satellites, or those obtained as products of the processing of global high-resolution data. Emphasis will also be given to crowdsourced (for instance from social media) and voluntarily contributed data (Volunteered Geographic Information). Strengths and limitations of big geodata research are discussed in depth using real-world examples and practical exercises.
<b>Learning Outcomes</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• realize theoretical concepts of big geodata.</li> <li>• deal with big geodata and its analysis.</li> <li>• gain the required skills to deal with big geodata that rely on citizens as a source of data.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• Introduction – What is Big GeoData?</li> <li>• Methodological Challenges</li> <li>• Sources of Big GeoData (sensors and web sensor services, imagery and high resolution imagery, global geospatial high resolution databases, social media)</li> <li>• Mining data</li> <li>• Python for Data Analysis</li> <li>• Case studies, examples and applications</li> <li>• Citizen Science</li> <li>• Crowd-sourced geodata: passive and active (VGI)</li> <li>• The OpenStreetMap database and platform</li> <li>• Mobile Apps for crowdsourcing geodata</li> <li>• Applications of crowd-sourced geodata</li> <li>• Collaborative platforms</li> <li>• Data visualisation</li> </ul>
<b>Prerequisite</b>	-None
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Li, G., Wang, J., Zheng, Y., Fan, J., Franklin, M.J. 2018. <b>Crowdsourced Data Management</b>. <b>Course name</b>	<b>Geospatial Data Analysis</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description</b>	This course focuses on implementation of spatio-temporal analyses and spatial statistics including exploratory analysis, spatial autocorrelation and spatial regression, point and areal pattern analysis, interpolation and sampling methods, model building, distance and directional analysis, geometrical processing, map algebra, surface analysis, network and locational analysis.
<b>Learning Outcomes</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• identify the proper quantitative and geostatistical methods for solving real-world problems.</li> <li>• apply several geo-analytical techniques for solving real-world problems.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• Exploratory Spatial and Spatio-temporal Data Analysis and Data Visualisation</li> <li>• Spatial Statistics including Spatial Autocorrelation and Spatial Regression</li> <li>• Spatial statistics I Point Pattern Analysis (Geometric Measurements, Quadrat Count Analysis, Kernel Density Analysis, Nearest Neighbor Analysis)</li> <li>• Spatial statistics II. Line Data Analysis (Line Length, Line Density, Line Direction, Line Orientation)</li> <li>• Network Analysis (Routing, Service Area, Closest Facilities, O-D Cost Matrix)</li> <li>• Areal Analysis (Spatial Autocorrelation, Joint Count)</li> <li>• Surface Analysis I (Spatial Interpolation, Distance Analysis, Density Analysis, Surface Analysis Operations).</li> <li>• Surface Analysis II</li> <li>• 3-D Analysis (Draping, Extrusion, Line-of-Sight, Viewshed, Skylines, Volumetric Analysis, Animation).</li> </ul>
<b>Prerequisite</b>	Geospatial Data Acquisition
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Thill, J.-C., Dragicevic, S. (eds) 2018. <b>GeoComputational Analysis and Modeling of Regional Systems</b>. 1st ed, 410 pages. <b>Course Name</b>	<b>Geo-visualization</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description:</b>	This course provides students with both the conceptual understanding and practical experience needed to design effective dynamic geographic representations. The course explores issues of computer based mapping and Geo-visualization including concepts for geographic data representation, symbolization, map design, 3D visualization, and web-based mapping.
<b>Learning Outcomes:</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• implement advanced geo-visualization tools using industry standard software.</li> <li>• produce outstanding visual representation of geographic data using current geo-visualization tools</li> <li>• demonstrate understanding on how interactive and dynamic maps are made.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• Intro to geovisual analytics, Atlas topic and structure, Mapping techniques and design overview.</li> <li>• Visual variables and color, vector data model, Choropleth mapping.</li> <li>• Map projections and coordinate systems</li> <li>• Typography and label placement. Raster data model. Terrain mapping.</li> <li>• Layout, mapping critique.</li> <li>• Flow maps. Network analysis</li> <li>• Online-mapping with OnlineGIS.</li> <li>• 3D thematic maps with ArcPro</li> <li>• Geo-visualization LiDAR data in ArcPro</li> </ul>
<b>Prerequisite</b>	-None
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Gorr, W and Kurland, K. 2017. <b>GIS Tutorial 1 for ArcGIS Pro: A Platform Workbook</b>. 1st ed, 482 pages. ESRI Press. <b>Course Name</b>	<b>Remote Sensing and Photogrammetry</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description</b>	The focus is given to satellite remote sensing, airborne, drone and terrestrial photogrammetry; and airborne, terrestrial and mobile laser scanning. Optical, multispectral, hyperspectral and microwave sensors are presented. The state-of-the-art sensor technology is presented and discussed. Advanced techniques for image quality enhancement, data fusion, classification and change detection based on images and point clouds are illustrated. The data acquisition workflow using modern surveying techniques such as unmanned aerial vehicle (UAV) and laser scanner is analysed.
<b>Learning Outcomes:</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• work with various remote sensing data types and spectrum.</li> <li>• deal with advanced methods of remote sensing-based image processing techniques.</li> <li>• prepare a workplan to deal with various advanced surveying devices including drones and 3D laser scanners.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• Introduction: overview on technologies for Earth Observation.</li> <li>• Physical aspects of the electromagnetic spectrum.</li> <li>• Interaction between electromagnetic waves and the atmospheric and Earth surface</li> <li>• Examples of spectra from different types of materials.</li> <li>• Remote sensor technology: parameters, spatial and radiometric resolution, classification of sensors, and radiometric calibration.</li> <li>• Image formation: digital image structure, sampling theory and quantization. processes, aliasing, colour spaces.</li> <li>• Geometric correction of satellite images.</li> <li>• Radiometric calibration: background, lab experiments.</li> <li>• Thematic classification: concepts of thematic mapping, classification criteria, supervised and unsupervised techniques, pixel-based and object-based methods, multi criteria methods, validation.</li> <li>• Extraction of biophysical and geophysical parameters from images.</li> </ul>

<b>Course Name</b>	<b>Urban and Environmental Applications of Geoinformatics</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description</b>	<p>This course will give students a fundamental understanding of how geoinformatics is currently used in urban and environmental sciences. The course focuses on the application of geoinformatics by integrating theory and application of spatial analysis to solving real-world urban and environmental problems in specific topics such as: air pollution, climate change, biodiversity, soil management, natural hazards, water resources, vegetation and forestry, land use and land cover, urban landscapes, urban growth modeling, and population estimates.</p> <p>Students will read and critically evaluate current literature on these topics and have the opportunity to conduct their own independent research on case studies relevant to the course topics.</p>
<b>Learning outcomes</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• apply the knowledge and techniques required for solving urban and environmental problems.</li> <li>• demonstrate understanding of how to collect geospatial data for comprehensive urban and environmental studies.</li> <li>• use geoinformatics in solving urban and environmental problems through execution of a term project and presenting it both orally and in written form.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• Climate change, drought, Air pollution</li> <li>• Soil management (soil erosion, soil contamination)</li> <li>• Natural hazards (mass wasting, earthquakes, floods, etc)</li> <li>• Water resources (Groundwater vulnerability modeling)</li> <li>• Land use and land cover changes</li> <li>• Biodiversity/patch analysis</li> <li>• Urban planning, urban sprawl analysis, urban growth modeling</li> <li>• Population estimation</li> <li>• Network Analysis</li> </ul>
<b>Prerequisite</b>	<p>Remote Sensing and Photogrammetry Geospatial Data Analysis</p>
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Bajjali, W. 2018. <b>ArcGIS for Environmental and Water Issues</b>. 1st ed, 353 pages. Springer International Publishing. <b>Course Name</b>	<b>Geo-application Development</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description:</b>	The course teaches the basic concepts of programming using selected programming language such as Python for solving problem related to geospatial information. this course includes practical lab with exercises aiming at developing programming skills and applying those skills to various geospatial and environmental problems.
<b>Learning Outcomes:</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• explain basic programming terms and concepts.</li> <li>• write programming codes to perform specific tasks within geoinformatics.</li> <li>• identify requirements of data, programming tools and functions, according to specific application tasks.</li> <li>• access programs and scripts available from various sources and embody them within geoinformatics application to be built-upon.</li> </ul>
<b>Syllabus</b> (List of lessons)	<ul style="list-style-type: none"> <li>• Basic concepts of Python computer programming</li> <li>• Variables, arithmetic and modules</li> <li>• Version Control and GitHub</li> <li>• Data types, lists and indices, objects, loops</li> <li>• Python Functions</li> <li>• Basics of data visualization</li> <li>• Pandas library for data analysis: introduction to DataFrames; read, write and processing data files. Practical exercises.</li> <li>• Introduction to Python for geospatial (advantages, available tools)</li> <li>• Shapely module: create geometric objects (Points, LineStrings, Polygons, Geometry Collections), explore attribute and functions. Practical exercise.</li> </ul>
<b>Prerequisite</b>	Remote Sensing and Photogrammetry Geospatial Data Analysis
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Zandbergen, Paul A. 2018. <b>Python scripting for ArcGIS</b>. 3rd ed, 538 pages. Springer International Publishing. <b>Course name</b>	<b>Web GIS and Geo-services</b>
<b>Credit Hours:</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description:</b>	This course focuses on the basics of web-GIS system architecture, geospatial web services, and mash-ups. It introduces the key elements of mobile GIS solutions, the functionality of geo-portals and web technologies, web mapping interoperability utilizing universal data standards, and new concepts in CyberGIS.
<b>Learning Outcomes:</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• deal with the technology related to Web GIS services</li> <li>• follow up with the up-to-date services in Web GIS</li> <li>• differentiate between the various Web-GIS services and their usage</li> <li>• apply web GIS to theoretical and practical cases.</li> </ul>
<b>Syllabus</b> (List of lessons)	<ul style="list-style-type: none"> <li>• Web GIS basics, applications, and services</li> <li>• Cloud GIS</li> <li>• Standards for distributed GIS services</li> <li>• Story maps and web app templates</li> <li>• ArcGIS Web AppBuilder</li> <li>• Mobile GIS</li> <li>• Real-time Web GIS</li> <li>• Spatial Analysis online</li> <li>• 3D Web GIS</li> <li>• Geoprocessing services</li> </ul>
<b>Prerequisite</b>	Geospatial Data Analysis
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Fu, H. 2018. <b>Getting to know Web GIS</b>. 3rd ed, 472 pages. ESRI Press. Print ISBN: 978-1589485211.</li> <li>• Tiwari, A. &amp; Jain, K. 2017. <b>Concepts and applications of Web GIS</b>. 1st ed, 322 pages. Nova Science Pub Inc. <b>Course Name</b>	<b>Engineering Surveying</b>
<b>Credit Hours:</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description:</b>	This course aims at giving students some surveying skills to support planning, operating, and processing of high-precision surveying measurements. Students are provided with methods and practical training on instruments for surveying and monitoring, including levelling, total station, GNSS and terrestrial laser scanning. Applications will include mapping of natural and man-made features, stakeout, and deformation monitoring infrastructures and geological hazards (e.g., landslide, faults movements etc.).
<b>Learning Outcomes:</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• use surveying instruments such as levelling, total station, GNSS and terrestrial laser scanning.</li> <li>• stakeout man-made and natural features.</li> <li>• implement surveying calculations.</li> <li>• design altimetric and 3D surveying and GNSS networks.</li> <li>• apply knowledge for deformation monitoring and change detection.</li> <li>• present and display data using appropriate methods.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• Introduction to the course with overview on the topics to be taught.</li> <li>• Geodetic (levelling and total station) and GNSS techniques for surveying: sensors, network design, data processing and quality assessment, lab experience.</li> <li>• Pre-processing and adjustment of geodetic networks, lab experience.</li> <li>• Terrestrial Laser Scanning techniques, lab experience.</li> <li>• Point cloud processing: pre-editing, registration and georeferencing, filtering and subsampling, change detection, primitive interpolation, lab experience.</li> <li>• Geodetic/GNSS/Areal-based techniques for structural monitoring.</li> <li>• Staking-out of buildings and infrastructures based on geodetic and GNSS techniques..</li> <li>• Engineering surveying for applications in constructions, geology and environment</li> </ul>
<b>Prerequisite</b>	-None
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Kennie, Tom JM, and Gordon Petrie. 2017. <b>Engineering surveying technology</b>. <b>Course Name</b>	<b>Research Methods in Geoinformatics</b>
<b>Credit Hours</b>	3 CH (11 ECTS credits)
<b>Course Description:</b>	This course is designed to offer students concepts and instruments necessary to enhance their communication skills in public speaking, written communication (special emphasis on report and project proposals), and digital communication to facilitate their future career in geoinformatics.
<b>Learning Outcomes:</b>	<p>After completing this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• communicate effectively and professionally through writing, speaking, and listening.</li> <li>• explain the value of networking strategies relevant to professional development. apply networking strategies to demonstrate effective networking conversations and written communications.</li> <li>• demonstrate understanding of successful job interview process.</li> </ul>
<b>Syllabus (List of lessons)</b>	<ul style="list-style-type: none"> <li>• How to write a thesis (including thesis proposal, defining research, using bibliometric services, analysing discussing research results)</li> <li>• CV building. This module includes a training session based on analysis of CV and tips on how to write a good CV to raise career opportunities.</li> <li>• How to write an abstract</li> <li>• How to write competitive proposals.</li> <li>• Public speaking and pitching. This module includes how to present yourself and be prepared to present your idea/work to the public.</li> <li>• Digital communication</li> <li>• How to prepare and be prepared to an interview.</li> <li>• Negotiating technique and how to negotiate.</li> <li>• How to create and manage a team. Time management.</li> <li>• Goals settings. Networking.</li> </ul>
<b>Prerequisite</b>	-None
<b>Course literature</b>	<ul style="list-style-type: none"> <li>• Niles, S. and Harris-Bowlsbey, J. 2016. <b>Career Development Interventions</b>. 5th ed, 552 pages. Pearson. ISBN-10: 1599637596, ISBN-13: 978-1599637594.</li> </ul>

<b>Course Name</b>	<b>Special Topics in Geo-informatics</b>
<b>Credit Hours:</b>	3 CH (11 ECTS credits): 2 CH theoretical and 3 CH practical
<b>Course Description:</b>	This course focuses on advanced knowledge and practical skills not gained in the other courses e.g. 3D analysis, spatial modeling, multiple regression, principal components analysis, clustering methods, and time series analysis. The course has also a lab component where students practice applying the analysis methods using a geoinformatics software.
<b>Learning Outcomes:</b>	At the end of this course, students will be able to: <ul style="list-style-type: none"> <li>• explore new areas of geoinformatics.</li> <li>• learn advanced knowledge of geoinformatics.</li> </ul>
<b>Syllabus</b> (List of lessons)	<p>The course contents vary from one semester to another. The following list of applications are example areas of further study:</p> <ul style="list-style-type: none"> <li>• Geosciences</li> <li>• Photogrammetry</li> <li>• Disaster Management</li> <li>• Water Resources Management</li> <li>• Digital Image Processing</li> <li>• Urban Planning</li> <li>• Environmental Management</li> </ul> <p>Techniques and methods may include:</p> <ul style="list-style-type: none"> <li>• 3D analysis</li> <li>• Hyper spectral data analysis</li> <li>• Geospatial modeling (cellular automata-based model)</li> <li>• Multiple regression</li> <li>• Principal components</li> <li>• Clustering methods</li> <li>• Time series analysis</li> </ul>
<b>Prerequisite</b>	Dept. Approval
<b>Course Literature</b>	Selected Readings

<b>Course Name</b>	<b>Environmental Systems</b>
<b>Credit Hours:</b>	3 credits (3 hours theory) (11 ECTS credits)
<b>Course Description:</b>	This course introduces students into the environmental systems and its components and characteristics. It also give students problems of environmental systems, ecological succession and cycles of main elements. The course focuses on the impact of human activities and its mitigation.
<b>Learning Outcomes:</b>	<p>At the end of this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Recognize the basics of environmental science</li> <li>• Identify environmental problems</li> <li>• Identify ecological succession</li> <li>• Understand the theories of life origin and human development</li> <li>• Understand the Biogeochemical cycles and human impact on the environment and mitigation</li> <li>• Distinguish between human and natural systems</li> </ul>
<b>Syllabus (List Of Lessons)</b>	<ul style="list-style-type: none"> <li>• Introduction to environmental science</li> <li>• Materials and energy</li> <li>• Origin of life on earth and human development</li> <li>• Environmental systems</li> <li>• Biogeochemical cycles</li> <li>• Human impact on the environment and mitigation</li> <li>• Human and natural systems</li> </ul>
<b>Prerequisite</b>	-None
<b>Course Literature</b>	<ul style="list-style-type: none"> <li>• Wright, R. and Boorse, D. 2016. <b>Environmental Science: Toward A Sustainable Future</b>. 13th Edition, 672 pages. Pearson. <b>Course Name:</b>	<b>Advanced Environmental Geology</b>
<b>Credit Hours:</b>	3 credits (3 hours theory) (11 ECTS credits)
<b>Course Description:</b>	This course focuses on the fundamentals of physical geology (rock types, mineral identification, plate tectonics, etc.), with an emphasis on human interaction with their environment. We will explore natural processes and anthropogenic (human-impacted) effects on those processes in the context of natural hazards, natural resources and sustainability.
<b>Learning Outcomes:</b>	<p>At the end of this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Explain the dynamic behavior of the Earth as a complex system.</li> <li>• Discuss issues related to human population growth and its impact on the natural world.</li> <li>• Describe the interactions between tectonic plates and volcanic eruptions and earthquakes.</li> <li>• Explain the ways that people contribute to and mitigate damage as a result of natural disasters like tsunamis, landslides, and flooding.</li> <li>• Discuss evidence of global climate change and possible impacts of anthropogenic warming.</li> <li>• Describe appropriate locations for waste disposal.</li> <li>• Explain the causes of soil, air and water pollution</li> </ul>
<b>Syllabus (List Of Lessons)</b>	<ul style="list-style-type: none"> <li>• Earth Materials, Earth's structure and plate tectonics</li> <li>• Earthquakes, Volcanoes, and Mass wasting</li> <li>• Streams, flooding and coastal flooding</li> <li>• Soil resources and Water resources</li> <li>• Mineral/Rock resources, Fossil fuels</li> <li>• Alternative energy resources</li> <li>• Pollution and waste disposal</li> <li>• Air resources (ozone hole, smog)</li> <li>• Global climate change</li> </ul>
<b>Prerequisite</b>	-None
<b>Course Literature</b>	<ul style="list-style-type: none"> <li>• Reichard, J. 2013. <b>Environmental Geology</b>. McGraw-Hill Education. 10th ed. 551 pages. Print ISBN: 0077791762. <b>Course Name:</b>	<b>Earthquakes</b>
<b>Credit Hours:</b>	3 credits (3 hours theory) (11 ECTS credits)
<b>Course Description:</b>	The course is designed to offer students deep knowledge on the mechanics of earthquakes and the seismic waves. The course introduces students into earthquakes hazard and risk assessment the methods of interpreting seismic data.
<b>Learning Outcomes:</b>	<p>At the end of this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Understand the mechanics of earthquakes</li> <li>• Determine the locations of earthquakes</li> <li>• Assess the hazard and risk of earthquakes</li> <li>• Recognize the seismic activities in the Middle East and Jordan</li> <li>• Interpret seismic data</li> </ul>
<b>Syllabus (List Of Lessons)</b>	<ul style="list-style-type: none"> <li>• The physics and mechanics of earthquakes</li> <li>• The seismic waves</li> <li>• Locating earthquakes and their depth</li> <li>• Earthquake recorder network???</li> <li>• Earthquake hazard and risk assessment</li> <li>• Earthquake activities in the Middle East</li> <li>• Interpretation of the seismic data</li> <li>• using appropriate software</li> </ul>
